## smartGAS.

- Multigas analyzer
- Easy operation via touch screen
- Easy sensor calibration
- Best measurement performance
- For installation in a 19" rack
- Analog or digital output
- Photoacoustic sensors
- NDIR sensors
- Paramagnetic sensors Technology
- Electro chemical sensors

The ANAREX  $SF_6$  analyzer of smartGAS is a high-performance solution for the leakage detection in high voltage application. It convinces with its highly accurate and stable measurement performance as well as its customer-friendly interfacing via touch screen along with a simple sensor calibration.

The ANAREX is designed as a multi-gas analyzer and is suitable for installation in a 19" rack.

The smartGAS analyzer can also use different technologies to fulfil all kinds of application requirement.

The smartGAS Analyzer is equipped with a 5.6" touch screen, that displays the gas concentration as real-time reading. The internal software is designed to control zero, span and third point calibration to ensure a perfect accuracy of the measurement values.

**Application examples** High voltage

Measuring principles Infrared NDIR Peripherals
Gas cooler
Pumps
Particle filter
Tubes
Mounting equipment

**Customizing options**Measuring gases

Detection ranges
Design and Software
Gas pre treatment

## **General features\***

Measurement principle:	SF <sub>6</sub> NDIR
Measurement range:	0 50 ppm
Detection Limits:	≤ 1.15 ppm
Repeatability:	≤ ± 0.5 ppm
Drift:	≤±7 ppm over 240 h period

## **Basic information**

Display:	Touch screen, 5.6" LCD
Analogue output:	4-20 mA (in operation) 2 mA (Warm-up or alarm)
Load resistance:	250 Ω ~ 350 Ω
Alarm output:	Device status alarm // Measurement channel level alarm
	Relay will close and isolate if alarm limits are exceeded
Relay:	1 A Trigger (250 V AC / 2 A, resistive load)
Communication:	RS232 (DB-9 Female)
Power:	(198 ~ 242) V AC, 50 / 60 Hz
Power connection:	EN 60320 C1
Fuse:	Rated current: 3A; Size: 5 x 20 mm
Protection level:	IP42 (EN 60529)
Weight:	15 kg

## **Gas flow & Environment information**

Gas Inlet flow:	(0.4 ~ 0.8) L/min
	(flow fluctuation ≤ 0.02 L/min)
Gas temperature:	(5 ~ 35) °C
Gas pressure:	(76 ~ 116) kPa
Humidity:	non-condensing
	Inlet dew point: 5°C ± 0.1°C
Particulates:	100 μg / m³, ≤1 μm
Zero gas:	99.999 % N <sub>2</sub> (NDIR)
	Clean air, free of sample gas (Photoacoustic)
Span gas:	75 % ~ 110 % of span point
	Clean air (0 $\sim$ 25 % O <sub>2</sub> measurement)
Third point gas:	35 ~ 75 % of span point
Operation temperature:	10°C ~ 40°C
Humidity:	0 ~ 95 % RH (non-condensing)
Pressure:	76 kPa ~ 116 kPa

<sup>\*</sup> Typical values related to 1013 hPa, Ta = 22 °C, flow = 0.7 l / min for dry (not condensing) and clean sample gas. Stated values exclude calibration gas tolerance.
